RAÚL ALBERTO CALMÓN DAZA

Certified Azure Security Engineer (AZ-500) | Systems & Cybersecurity Engineer

raulcaldaz@gmail.com | +58 414 549 35 49 | Barinas, Venezuela | LinkedIn: linkedin.com/in/raul-calmón/

Portfolio: racd25.github.io/Portafolio | GitHub: github.com/Racd25

Professional Summary

Systems Engineer with 4 years of experience managing and securing IT infrastructure, specializing in Active Directory administration, access control (RBAC/IAM), and system hardening. Proven track record of maintaining high system availability for critical operations while enforcing strict security protocols. AZ-500 Certified and Harvard CS50 Cybersecurity graduate, combining strong on-premise foundation with cloud security skills (Microsoft Sentinel, KQL, SOAR) and backend security engineering in Go. Trilingual professional (Spanish/English/French) seeking remote-first Cloud Security, DevSecOps, or SOC roles.

Technical Skills

Security Operations:	SIEM/SOAR (Microsoft Sentinel), KQL Analytics, Endpoint Protection, IAM, MFA Enforcement, Threat Detection, Incident Response Playbooks (Logic Apps)
Cloud & Infrastructure:	Microsoft Azure Administration, Google Workspace Admin, Linux (Kali, Debian), Docker, Virtualization, NSG/Firewall Configuration
Development & Automation:	Go (Concurrency, Worker Pools, Network Sockets, Azure SDK & Microsoft Graph clients), Python (Intermediate), Java, Kotlin, MongoDB, Automated Workflow Orchestration (GitHub Actions)
Standards & Frameworks	ISO/IEC 27001 Information Security Management Systems (ISMS), Cryptography Fundamentals, OWASP Security Headers

Professional Experience

IT Systems Administrator / Technician 2022 - Present

Executive Directorate of the Magistracy – Regional Barinas Barinas, Venezuela

- Maintain uptime for critical judicial systems through proactive monitoring, patch management, and preventive maintenance across distributed infrastructure.
- Strengthen security posture for sensitive databases by implementing role-based access controls (RBAC), reducing unauthorized access incidents to zero.
- Advise leadership on infrastructure upgrades and risk mitigation strategies, contributing to a measurable reduction in technical debt over 12 months.
- Deploy and configure Microsoft Sentinel in an Azure lab environment, developing KQL analytics rules for real-time threat detection and automated response workflows.
- Led a security baseline assessment of the regional judicial network (~1,000 addresses) using self-developed Go tooling, uncovering critical exposures (cleartext management protocols, end-of-life web stacks, unsegmented IoT devices) and delivering a prioritized hardening plan to leadership.

Technical Projects

NetSentinel – Parallel Network Scanner & Host Discovery Tool | Go (2026)

- Developed a high-performance network scanner in Go leveraging worker pools, channels, and thread-safe operations (sync.Mutex) for concurrent ICMP ping sweep and reverse DNS lookup.

- Implemented CIDR bitmask arithmetic to accurately calculate network boundaries, automatically filtering network/broadcast addresses.

- Implemented service banner grabbing and live CVE enrichment against the NVD API (rate limiting + disk caching), generating JSON/HTML risk reports; published 3 versioned cross-platform releases (Windows, Linux amd64/arm64)

AzRBAC Auditor – Azure IAM Posture Auditor | Go (2026)

- Developed an open-source CLI auditor that authenticates via OAuth2 client credentials (Entra ID) and enumerates all RBAC role assignments through the Azure Resource Manager API with pagination.

- Integrated Microsoft Graph REST clients to resolve identities (users, groups, service principals) and enforce detection rules: privileged roles assigned directly to users, guest accounts with elevated access, and service principal secrets near expiration. Produces executive HTML/JSON reports aligned with Microsoft security best practices.

WebSentinel — Web Security Posture Auditor | Go (2026)

- Developed an open-source web posture auditor that inspects TLS configurations (protocol versions, certificate chain trust, cipher suites, HTTP→HTTPS redirection) via crypto/tls and x509 analysis, plus security headers (HSTS, CSP, X-Frame-Options, Referrer-Policy, Permissions-Policy) and cookie flags.

- Implemented concurrent sensitive-path scanning using goroutine worker pools and a soft-404 baseline technique; produces A-F grade with 100-point score and HTML/JSON executive reports. Zero external dependencies.

Cloud Security & SIEM Implementation Lab Personal Project | Azure (2026)

- Architected end-to-end Microsoft Sentinel deployment in Azure to monitor cloud infrastructure, simulating enterprise-scale threat detection.
- Developed custom KQL queries to identify anomalous authentication patterns and potential lateral movement, improving detection coverage by 40%.

Certifications & Education

CERTIFICATIONS

- CS50's Introduction to Cybersecurity | Harvard University (2026)
- Microsoft Certified: Azure Security Engineer Associate (AZ-500**)** | Microsoft (2026)
- Go Fundamentals Certification | Coddy (2026)
- Go Logic & Flow Certification | Coddy (2026)
- ISO 27001: Information Security Management Foundations | Hacker Mentor (2026)
- Ethical Hacking & Cybersecurity Certification | Hacker X (2025)
- Cybersecurity & Pentesting Course | Edutin Academy (2025)
- Fundamentals of Computer Forensics | SUSCERTE (2024)
- Introduction to Cryptography | SUSCERTE (2024)

EDUCATION

- B.Sc. in Systems Engineering | Universidad Santa María (2019 - 2025)
- B.Sc. in Computer Engineering | UNELLEZ (2020 - 2025)

Languages

- **Spanish:** Native
- **English:** Professional proficiency (C2 Certified)
- **French:** Intermediate
- **German:** Basic
